White Paper: PPM-Level HCl Measurements From Cement Kilns And Waste Incinerators By FTIR Spectroscopy

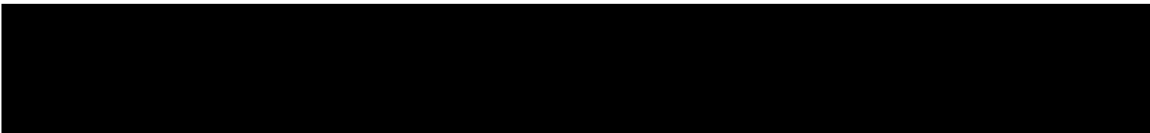

By Peter Zemek, PhD, Joe Van Gompel, PhD, and Steven Plowman, MIDAC Corporation

Fourier transform infrared (FTIR) spectroscopy is an accepted and well-known technique by the EPA to measure hydrogen chloride (HCl). Over the past 10 years, HCl by FTIR has been utilized successfully at many cement kilns and other incineration technologies using EPA Method 321 or 301. HCl is a common byproduct from cement kilns and municipal waste incinerators.

Datasheet: Personal Dust Monitor, PDM3600

Engineered for timely, high-quality personal dust exposure information, the Thermo Scientific Model PDM3600 is a real-time, respirable dust monitor designed specifically for U.S.-based mining applications.
